Notes:

1. The Agriculture, Forestry, Fishing and Hunting sector is larger in Napa and Sonoma Counties than the employment statistics suggest because wineries are often grape growers and wine makers, but typically are classified as winemaking manufacturers.
2. Although the manufacturing sector as a whole did not make it into the top quartile for Lake or Mendocino County, the beverage manufacturing sub-sector is an emerging industry in both counties.
3. Although the Accommodation and Food Services sector did not make it into the top quartile for Lake, Solano or Sonoma County, the sector is growing in all counties except Lake.

Glossary of Industry Sectors

NAICS Sector Code	Industry Sector <ul style="list-style-type: none"> • Sub-sectors

Glossary of Key Terms

Jobs: An estimate of the number of jobs in the specified year, including FT and PT jobs, as well as temporary and seasonal jobs that reflect current employment. It does not include self-employed workers.

Job Growth (Projected): A projection of the number of net jobs gains or losses over the specified outlook period. $\text{New Jobs} - \text{Lost Jobs} = \text{Job Gains (or losses)}$.

Job Growth Rate: A projection of the rate of job growth or decline over the specified outlook period. This is not an annual job growth rate, although you can divide the growth rate by the number of years in the outlook period to calculate an annual growth rate. However, one should exercise caution when calculating an annual growth rate because job growth and decline doesn't necessarily occur at the same rate each year throughout the outlook period.

Location Quotient: Industry LQ is a way of quantifying how "concentrated" an industry is in a local area or region compared to its nationwide concentration. Industry LQ helps us:

- Determine which industries make the regional economy unique;
- Identify the "export orientation" of an industry and identify the most export-oriented industries in the region;
- Identify emerging export industries beginning to bring money into the region; and
- Identify endangered export industries that could erode the region's economic base.

Total Average Earnings: Includes, for a specific industry, the total sum of its wages, salaries and proprietor earnings, as well as other forms of compensation, divided by the number of workers. Because it includes all forms of compensation, this is not a good measure of "average salary."

Gross Regional Product: GRP measures of the size of a regional economy and its individual industry sectors, whereas Gross Domestic Product is the measurement at the nationwide level. GRP is defined as the market value of all final goods and services produced or provided within a specified geographic area.

Overall Ranking: Gives equal value to the six employment and economic indicators described above and provides a ranked order of the industry sectors as a result.
